

AZENTIAL™·ZN

FEATURES AND BENEFITS

Zinc Micronutrient Seed Treatment

- Jump-starts early season plant growth for better root establishment.
- Low use rate and low viscosity offer optimal handling features.
- Consistent seed coating provides improved planter flowability.

PRINCIPAL FUNCTIONING AGENTS

- Zinc..... 6%
Chelated Zinc (Zn)

APPLICATION DIRECTIONS

- 4.0-10.0 fl oz/Cwt rate is crop dependent

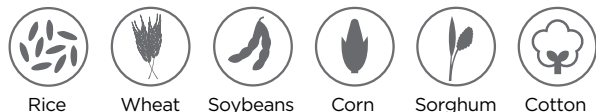

COMPATIBILITY

Mixes with most common seed treatments. Compatibility test is still recommended.

Azential™ Zn is an EDTA chelated zinc seed treatment that is highly efficient and readily available for plant uptake. This zinc seed treatment helps to prevent early-season zinc deficiencies by jump-starting plant growth and root establishment. The EDTA zinc source is highly soluble in water and holds onto other trace elements in the mixture, preventing the chance of precipitation with better formulation stability and broader compatibility. The Azential Zn formulation has a convenient low use rate and low viscosity that offers optimal treatment and handling features.
