

CHS FIXATE®

Water Conditioner | Nonionic Surfactant | Humectant

- CHS Fixate® provides both water conditioning activity as well as pesticide enhancement.
- CHS Fixate contains an ingredient that when added to the spray water reacts with bicarbonate ions in the water to form both nitrogen and sulfate.
 - The nitrogen combines with glyphosate (and other pesticides) to improve the uptake and translocation of glyphosate.
 - The sulfate combines with impurities in the spray solution (calcium, iron, magnesium, sodium and other salts) to prevent them from combining with the pesticide and antagonizing the pesticide.
- CHS Fixate lowers the pH of the spray solution which allows specific pesticides (especially glyphosate) to be more active and less likely to interact with salts in the spray solution.
- CHS Fixate contains a penetrating nonionic surfactant that not only helps improve coverage on the plant but also improves deposition throughout the spray canopy.

Application Directions

Typical use rate is 2 qt/100 gal of spray solution

- 1-2 qt/100 gal for fully loaded glyphosate herbicides
- 2-4 qt/100 gal for partially or unloaded glyphosate herbicides
- 1-2 qt/100 gal for most other herbicides

Package Size

2x2.5 gal case, 275 gal, Repack, Bulk

Always read and follow label directions.
