

MEDIATE™ PLUS

FEATURES AND BENEFITS

High molecular weight drift and deposition agent.

- High molecular weight drift and deposition agent reducing driftable fines.
- Ammonium sulfate and defoamer for easy mixing.
- Designed for use with herbicides, such as glyphosate.

Mediate™ Plus contains a high molecular weight drift and deposition agent, ammonium sulfate and defoamer. Mediate Plus is designed for use with herbicides, such as glyphosate, that recommend ammonium sulfate and benefit from drift, deposition, and foam reduction. The increased polymer load in Mediate Plus, as compared to other drift control adjuvants, significantly limits the formation of driftable fines.

ACTIVE INGREDIENTS

- Proprietary blend of ammonium sulfate, polyacrylamide and dimethylpolysiloxane.....100%

APPLICATION DIRECTIONS

- The use rate for Mediate Plus is 2.5 gal/100 gal of spray solution.
- 2.5 gal of Mediate Plus will provide 8.5 lb/100 gal of ammonium sulfate as well as the necessary drift, deposition and defoamer to maximize the efficacy and accuracy of the pesticide application.

CROPS

PACKAGE SIZE | 2x2.5 gal | 275 gal | Bulk
