

# SOYSHOT®

## FEATURES AND BENEFITS

Safe and effective ortho-ortho EDDHA chelated soybean starter fertilizer.

- Increased availability of micronutrients.
- Increased availability of phosphorus.
- Maximum crop safety.

Soyshot™ is a starter fertilizer with a low salt index developed for maximum crop safety and performance in soybeans. Soyshot contains ortho-ortho EDDHA which chelates micronutrients in the soil and in the starter fertilizer improving nutrient availability during the growing season. Enhanced nutrient availability increases early growth, overall plant health, and ultimately yield.

## ACTIVE INGREDIENTS

- Total Nitrogen (N).....0%
  - Total Phosphorus (P<sub>2</sub>O<sub>5</sub>) .....10%
  - Total Potassium (K<sub>2</sub>O).....10%
  - Total Zinc (Zn) ..... 0.1%
- Derived from: zinc ortho-ortho EDDHA and zinc EDTA.

## APPLICATION DIRECTIONS

- **For use as an in-furrow starter fertilizer**  
Apply 1-2 gal/A alone or with water as an in-furrow starter fertilizer program for soybeans.

## CROPS

PACKAGE SIZE | 250 gal | Bulk
